

Harvest Pillar For VINEYARDS

Make your vineyard trellis systems last longer with durable Harvest Pillar concrete trellis posts. Save money on repair, maintenance, and labor costs.

Durable & Flexible Support

Harvest Pillar concrete trellis posts offer more durability than wood and steel in holding up the heaviest of yields year after year. Manufactured for optimal flexibility with prestressed tendons, **our concrete posts are perfect for repeated mechanical harvesting.**

Pest & Disease Resistant

Concrete does not attract pests and diseases, the two main culprits that damage wood posts. And unlike steel posts, Harvest Pillar does not rust nor contain toxins, both of which can leach into soil layers and impact vineyard grape and organic certification.

Weather & Season Tested

Withstanding almost any weather condition, Harvest Pillar remains unaffected by hot days, cold rains, or windy areas. No matter the weather event or seasonal change, our concrete trellis posts stands the test of time and will not rot, warp, bend, or corrode.

Made in California by Jensen Precast

Durable Posts. Sized for Growth.

Our posts come in sizes ranging from 6' to 24' high and 3" to 5" in width. We offer a variety of Harvest Pillar products for all your trellising needs, including brackets, anchors, and wire.

Typical Vineyard Example

LINE POST

Typical profile 3" x 3" x 8'

Harvest Pillar posts can be distributed up to 24' spacing in most applications, saving money with less posts per acre.

END POST

Typical profile 4" x 4" x 9'

Harvest Pillar end posts can be utilized in various configurations including with or without anchors.
